

Representative GPU Kernel Timing Breakdown for WSClean Stacking

- host median
- device median

- average-beam
- gridding

This plot uses the ``|kernel:`` stage timings from ``*_uprof_collect_inst.txt`` for `p={1,16,32,64}`. It replaces the CPU hotspot-function view because the AMD hotspot export mainly profiles CPU-side casacore/WSClean work, which is not representative of the GPU execution path.
