

CPU Scaling Limits for WSClean Stacking: 16384^2 , $t=256$, $c=256$
Matched CPU-only profiling logs explain the low parallel efficiency seen in Plot 25

Median inversion-time decomposition

Median weights->Grid() Median average beam Remaining inversion time

Gridding speedup outruns end-to-end speedup

..... Ideal speedup —■— Profiled gridding-stage speedup
—●— Plot 25 wall-time speedup —●— Parallel efficiency
